

WHAT IS CLAIMED IS:

1. A method of sending emergency call from a mobile terminal of a mobile communication system, the mobile terminal comprising means for acquiring position information that shows where the mobile terminal is, comprising the steps of:

locating the mobile terminal to generate the position information by the means for acquiring;

sending the emergency call with the position information from the mobile terminal to a server computer;

retrieving one of emergency institutions with reference to the position information by the server computer;

translating information including the position information to a language determined with reference to the position information by the server computer; and

sending the translated information to the emergency terminal of the retrieved emergency institution.

2. The method claimed in claim 1, wherein the mobile communication system provides international roaming service.

3. The method claimed in claim 1, wherein the emergency institutions include at least one of police, medical and financial institutions.

4. The method claimed in claim 1, wherein the means for acquiring comprises a GPS (global positioning system).

5. The method claimed in claim 1, further comprising the step of providing a support service for rising to an emergency to at least one of the mobile and emergency terminals.

6. The method claimed in claim 1, wherein the emergency call includes a message of first language, further comprising the steps of:
inputting the message by an input device of the mobile terminal;
sending the message from the mobile terminal to the server computer;

machine-translating the message from the language to second language different from the first language by the server computer; and sending the translated message from the server computer to at least one of the mobile and emergency terminals.

7. The method claimed in claim 1, wherein:
the retrieved emergency institution is a financial institution, which
is referred to as first financial institution;

another financial institution, which is referred to as second financial institution, identifies the user of the mobile terminal with reference to registration of the user for the mobile communication system; and

the second financial institution sends money to the first financial institution.

8. The method claimed in claim 1, further comprising the step of directing the user of the mobile terminal to the retrieved emergency institution with reference to the position information.

9. The method claimed in claim 8, wherein the directing step comprises the steps of:

sending map information including current position of the mobile terminal shown in the position information from the server computer to the mobile terminal:

displaying the map information on a display device of the mobile terminal.

the server computer translates the message from the language to second language different from the first language and sends the

information to a language determined with reference to the position information, and sending the translated information to the terminal of the retrieved emergency institution.

20. The computer program product claimed in claim 19, wherein the mobile communication system provides international roaming service.

21. The computer program product claimed in claim 20, wherein the emergency institutions include at least one of police, medical and financial institutions.

22. The computer program product claimed in claim 20, wherein the means for acquiring comprises a GPS (global positioning system).

23. The computer program product claimed in claim 20, further comprising the computer code for providing a support service for rising to an emergency.

24. The computer program product claimed in claim 23, wherein: the emergency call includes a message of first language, and the terminal comprises an input device for inputting the message and sends the message to the server computer;

the computer program product comprises computer codes for translating the message from the language to second language different from the first language and sends the translated message to the terminal.

25. The computer program product claimed in claim 23, wherein the retrieved emergency institution is a financial institution, which is referred to as first financial institution, comprising the computer codes for:

sending another financial institution, which is referred to as second financial institution, a request for identifying the user of the mobile terminal with reference to registration of the user with the

P095003 P095004

mobile communication system; and

sending the second financial institution a request for sending money from the second financial institution to the first financial institution based on the identification.

26. The computer program product claimed in claim 23, comprising the computer code for sending message for directing the user of the terminal to the retrieved emergency institution with reference to the position information.

27. A computer comprising a storage device that stores the computer program product claimed in claim 19.

28. A computer program product for execution by a mobile terminal of a mobile communication system, wherein the mobile terminal comprises means for acquiring position information that shows where the mobile terminal is, comprising the computer codes for:

generating the position information by the means for acquiring in response to predetermined input operation from an input device of the mobile terminal;

sending emergency call including the position information to a predetermined server computer.

29. A mobile terminal of a mobile communication system, comprising a storage device for storing the computer program product claimed in claim 28.

30. The mobile terminal claimed in claim 29, wherein the input device is used only for inputting the predetermined input operation.
